Note.—The above table is for the information of engineers and must not be considered in any way to authorize exceeding speed limit specified under "Speed Restrictions."

MISCELLANEOUS

1. At the following stations freight trains descending grade between Caliente and Lang will stop 10 minutes to allow heat to equalize in wheels and to permit train inspection. Light engines will stop a sufficient length of time for enginemen to inspect engine.

Marcel.—(Unless stop made at Cable.)

Woodford.—(Unless stop made at Walong.)

Bealville.—(Unless stop made at Rowen.)

When stop of ten minutes has been made at Rowen it will be necessary to allow for equalizing of wheel heat and inspection at some station between Rowen and Caliente.

Warren.—(Unless stop made at Larose.)

Fram.—(Unless stop made at Warren.)

Ravenna.—(Unless stop made at Paris or Acton.)

Russ.—(Unless stop made at Ravenna.)

McKittrick Branch.—Between mile posts 357 and 358.

Owenyo Branch.—At Little Lake, Teagle and Goler.

2. Before entering and after leaving sidings where necessary to apply train (automatic) brakes, stop and allow sufficient time to insure release of all brakes—one to one and one-half minutes is usually required for this purpose. Be governed by gauge and time duration in this operation.

3. Conductor report to Superintendent, by wire, any failure to properly control train by air brakes and deliver to Car Inspector at first terminal list showing tonnage of each car in train. Car Inspector will add to list the piston travel of each car in train, as shown by test made before road engine is cut off, also result of three-minute test of all retainers. The list will then be forwarded to Superintendent by first mail.

4. The maximum tonnage per operative brake between Caliente and Mojave is 115 Ms and between Mojave and Saugus 120 Ms.

5. **Retainers** will be used on passenger trains as follows:
 Eastward trains.....Cameron to Mojave—All retainers
 Eastward trains.....Vincent to Acton—Available retainers
 Westward trains.....Vincent to Harold—Available retainers
 Westward trains.....Tehachapi to Caliente—All retainers

- Retainers** will be used on freight trains as follows:
 Eastward trains.....Cameron to Mojave
 Eastward trains.....Vincent to Lang
 Westward trains.....Vincent to Harold
 Westward trains.....Tehachapi to Caliente
 Westward trains.....McKittrick to Lokern
 Westward trains.....Mabel to Linnie
 Westward trains.....Searles to Garlock

Retainers will be used on other districts when in judgment of enginemen it is deemed necessary.

Where retainers are used the rate of speed of freight trains on any grade of over one per cent will not exceed 25 miles per hour, and on grades of this character MORE THAN FIVE MILES LONG, FOR THE FIRST FIVE MILES THE TIME CONSUMED IN TRAVELING ONE MILE SHALL NOT BE LESS THAN THREE MINUTES. The above maximum speed restriction will not affect the speed on heavier grades and other locations, where the maximum is now provided. Retainers on eastward freight trains entering Mojave must not be turned down until train comes to rest on designated tracks.

6. Rear brakeman will open valve on rear of steam heat line and valve must be closed on engine at yard limit boards—Fresno, Bakersfield and Mojave. At other points: Station one mile board.

7. **Helpers** will cut out at Vincent unless otherwise instructed. Helpers cut out at Summit and ordered through to Mojave will precede train from Summit, unless otherwise instructed.

In taking water on freight trains with helper cut in, train will be cut ahead of first helper from head end and will back to point where it is to take water. After stopping, train will be cut ahead of following helper.

Should a stop be made short of a turnout at a point where helpers are to be cut out, cut will be made ahead of leading helper and train engine will pull head portion to clear, to prevent damage done by helper in shoving during short move.

In movement of light engines between Bakersfield and Mojave the number of engines coupled its restricted to four.

8. **Fresno.**—Eastward trains entering yard will be governed by signal from Herder as follows:

- Trains via Merced, green signal.
- Trains via Kerman, yellow signal.

Mojave.—Freight trains entering yard will be governed by signal from Herder as follows:

- Eastward trains, yellow signal.
 - Westward S. P. trains, yellow signal.
 - Westward Santa Fe trains, green signal.
- Trains from Owenyo Branch stop before fouling main track, regardless of position of derailer or signals received.

9. **Fresno.**—Trains from Friant Branch and Sanger Branch stop at "stop" board at junction of these lines.

Goshen Jct.—Trains from Visalia Branch stop at "stop" board east end of yard.

Exeter.—Eastward trains stop at "stop" board at junction with Porterville Branch.

10. At least two loaded steel underframe cars must be placed immediately ahead of 2-10-2 type engines that are engaged in helping.

11. **Goshen Jct.**—End of the Visalia Branch will be at first switch east of the station where it enters Bakersfield-Fresno main track.

12. **Sunset Ry.** trains will be permitted to occupy main track between station train order signal and junction at Gosford without train orders to do so. All trains will approach junction switch at Gosford with caution and be governed by Rules 83, 98 and 99 of Book of Rules.

13. At Caliente, Bealville and Marcel siding next to main track will be known as eastward siding; back track will be known as westward siding.

14. At Rowen, siding between intermediate switches is designated as middle siding.

Siding east of middle siding is designated as westward siding.
 Siding west of middle siding is designated as eastward siding.
 Normal position of intermediate switches will be for continuous movement through sidings.

First-class trains will use middle siding entering at initial switch of this siding. Trains using other than designated siding will do so under flag protection or when authorized by train dispatcher.

15. House track at Woodford must not be used for setting out or storing of cars.

16. Tracks at following stations must not be used by F-3 or F-4 type engines. Spur at Bena, Caliente, Bealville, Rowen, Cable, Gloster, Ravenna, Russ and team track Honby.

17. Track next to main track (No. 1) west of station at Tehachapi will be used as westward siding and Track No. 2 as eastward siding.

18. Track next to and north of main track at Ducor will be known as siding No. 1. Second track north of main track, will be known as Minkler Southern Ry. main or No. 2 track. Trains will use extreme east switch to enter or leave Southern Pacific main track. Inside switches will be left lined for Siding No. 1.

19. Night signals will be displayed approaching and through all tunnels.

20. Engines heavier than 70,000 pounds on drivers will not be run east of Crump.

21. Cars exceeding 70 Ms gross will not be run over Kings River bridge, one mile west of Hardwick on Riverdale Branch. Such loads will be handled via Ingle.

22. Do not take water on Visalia Electric track at Exeter.

23. Conductors called for relief trains east of Bakersfield will report direct to Kern Jct. Tower for orders and immediately advise yard office of their arrival, so there will be no question as to whether conductor is on hand.

Conductors on westward relief trains from Bakersfield report at telegraph office for orders, also notifying yard office immediately for same reason as above stated. To expedite movement of relief trains out of terminals, report as quickly as possible after called and not wait to eat as meals will be provided on relief trains.
